Challenge your students: EXPERIENCE...

Enhance STEM Education and Inspire Students

The TEAMS program will help your students...

Make the connection between math and science to real-world issues. Participants use math, science and 21st century learning skills to problem-solve everyday world challenges.

Have a fun and unique learning experience. TEAMS offers a fun, project-based learning environment with new academic content. Students vie for competition day, state and national awards!

Discover their potential for engineering. Students increase their knowledge of engineering and how they, as future engineers, can make a difference in the world.

"Our students have participated in TEAMS for over twenty years. During that time the TEAMS competition has grown to be one of the biggest single draws for student interest. Our students look forward to it every year." — Ken Owens, TEAMS Coach (Texas)

Registration opens in September!

Competitions are held between February 10 and March 22, 2014. Choose to compete at a host site near you or at your own school or location.
